Server Monitoring

For most businesses, a problem with your server can bring your operations to a stand-still. That's why it's so important to maintain their health and performance at all times. With our server monitoring solution, we'll provide you with:

➤ **A Healthy, Secure Infrastructure.** We'll keep your servers patched with critical security updates, protected with anti-virus, and monitored 24/7/365 for performance.

➤ **Maximum Uptime.** Our real-time alerts allow us to catch smaller issues before they escalate into downtime. And, if there's ever an emergency, we'll know and be able to help straightaway.

➤ **Peace of Mind.** You can rest easy knowing that we have watchful eyes on this critical piece of your network – always.

WE'VE GOT YOU COVERED

Our solution monitors
59 health statistics, 24 hours a day, 7 days a week.

If you'd like reports on your asset inventory, patch status, or spyware status, we'll get you those, too.

Workstation Management

As cyberattacks increase in both severity and sophistication, it's all the more critical to protect your organization's machines from viruses, malicious emails, and the gaping vulnerabilities that result from improper patching and management. With our workstation management solution, we'll provide you with:

DID YOU KNOW?

40%
of cyberattacks are against organizations with fewer than 500 employees.

And of those affected…
60%
will go out of business within **6 months.**

➤ **Decreased Risk.** We'll shore up your defenses with anti-virus, anti-spyware, anti-spam, and regular patching so that your risk of infection is minimal.

➤ **Full Transparency.** You'll have unfettered access to your hardware and software inventory, open support tickets, and spam filter from our Optimal Central client portal – we have no secrets here.

➤ **Freedom to Work Effectively.** We'll also optimize your machine's performance with routines like temporary file deletion so your performance isn't bogged down.
