

Virtual CIO (vCIO)

Wish you could have an executive-level resource without the executive-level salary? You don't need to hire a CIO to get strategic guidance on your technology systems. With our Virtual CIO services, we'll provide:

- **Business-Oriented Guidance.** Your vCIO isn't just looking at your infrastructure – they're looking at how your technology supports your operations. How could you gain efficiencies? Competitive advantages? Which initiatives are high-priority, and which can wait? These are the answers we're looking for.
- **An Entire Company's Worth of Knowledge.** While you'll have one primary, dedicated vCIO, you'll still be leveraging our company's collective technical, strategic, operational, and executive expertise, along with our technical and strategic partnerships.

WHAT IF...

You had an objective, executive-level, business-minded resource to **build and execute your technology strategy?**

(And what if that came at a **fraction of the cost of a full-time CIO?)**

Strategic Technology Assessment

As the saying goes, you don't know what you don't know. And when it comes to technology, what you don't know could be putting you at serious risk. To help you make sense of your systems, our comprehensive strategic technology assessment provides you with:

OUR PROCESS

Before we ever take a look at your technology, we **interview a cross-section of your organization** to find out how they work, what their goals are, and where technology fits in.

This information sets the context for our entire assessment; **business first, technology second.**

- **A Detailed Analysis of Your Risks and Deficiencies.** We'll evaluate your systems within the context of industry best practices, and identify any and all gaps that we find. You'll have a clear picture of where your technology stands, and where you need to take it next (and it won't be written in tech jargon, either).
- **A Prioritized List of Actionable Recommendations.** You'll know exactly what steps you need to take to elevate your technology to the point where it will best support and advance your business goals. We provide you with a plan that we can help you implement, or that you can take to any other technology resource to execute – it's up to you.
